Carbon monoxide leak at Broadway Theatre

Mt. Pleasant, Mich. – On Wednesday, Dec. 2, after multiple people reported similar flu-like symptoms at McLaren Central Michigan, the Mt. Pleasant Fire Department received a call from Isabella County Central Dispatch regarding a possible carbon monoxide release at the Broadway Theatre. We responded to the establishment at 10:04 p.m.

Upon entering the building, we took samples of the atmosphere and recorded 80 parts per million (ppm) of carbon monoxide. According to policy, readings over 70 ppm are considered to be a dangerous level. Two workers were in the building at the time of the testing. The entire building was evacuated and DTE energy was contacted to assist in isolating the cause of the carbon monoxide. We identified a furnace that was not functioning properly and immediately shut the natural gas off to the unit. The unit was Red Tagged by DTE Energy which indicates a defect in the unit.

Once the unit was shut off, the building was ventilated. Additional air samples were obtained and the readings dropped dramatically. At approximately 9:30 a.m. on Thursday, Dec. 3, we met with a service contractor in an attempt to determine the cause of the buildup and to recheck the atmosphere. No levels of carbon monoxide were recorded in the building. The cause of the buildup is still under investigation.

The Friends of the Broadway, along with their heating and cooling contractor, are working diligently to correct the problem in hopes of reopening the theatre in time for this weekend's performances.

For further questions, please contact Lieutenant Michael Dunham of the Mt. Pleasant Fire Department at (989) 779-5123 or mdunham@mt-pleasant.org.
